General Comment

This is yet another attempt by this administration to further hamstring the coal industry in pursuit of a largely fictitious agenda concerning climate change. Even if they could completely eliminate the use of coal in the United States, the remaining world will continue to increase its use of coal as a way to improve their peoples way of life. If climate change is truly the end of the world scenario as it has been portrayed, the only logical answer is going to have to be the environmentally responsible use of coal, specifically carbon capture and utilization. Once again the world will need to turn to engineers and scientists for solutions, not to politicians.
