## General Comment

As a coal miner, tax payer and a citizen of this great country I would like to say this is on a good thing for the nation or states of Wyoming, Montana and all of the others who produce coal for this nation. If we keep taxing everything in the US out of business with an GDP of 0.2% for the first three months of 2015 how are we going to move forward. Then no one has come forward with a way to replace the power we now get from coal at a very low cost to each house hold, will we be paying a real high rate for power and have no jobs to do tis with. And the we have the taxes all of the people pay in every year form the their jobs at these coal mines so we tax them out how will we replace that income to the system ? So in closing I just think we are on a bad path of more taxes that will lead to more unemployment and less going into the tax coffers. So please look at this real hard and the whole out come if this is put in to place. Thank you Dane Ashley
